Operation Information:

Use the provided options to set the probe depth keeping it at a consistent height for repeatable results.

Option #1:

1. Remove the magnet keeper and insert the BakeOcouple™ positioning fixture in the Depth Gauge guide.
2. Set the depth of the probe to the desired level below top of the pan surface.

Option #2:

1. Remove the magnet keeper and place the BakeOcouple™ positioning fixture on the top of the pan.
2. Place the Depth Gauge in the bottom of the pan and measure the desired distance to set the desired probe depth above the bottom of the pan surface.
